This presentation will take a holistic look at the cyber security challenges of emerging AMI and smart grid technologies from a real-world perspective.

- Learn what utilities see as some of the actual challenges with smart meter and AMI deployments, and what steps are being taken today to reduce overall risk exposure to the bottom line.
- Discover the differences and similarities between the security challenges of emerging Smart Grid technologies and traditional IT and SCADA security challenges.
- Review current best practices for ensuring Smart Grid security when viewed from an organization, people, process and technology perspective.
